Tuning

Guitars have different headstock shapes, but the basic method to tune your instrument's strings is the same.

For manual tuning, you can use a tuning fork, electronic tuner, pitch pipe, or online tuner or app. To tune your guitar, start at a lower pitch below your desired pitch instead of starting at a higher pitch. This eliminates slacking of strings and reduces the chance of strings going out of tune due to slippage as you play.

If you use an A-440 tuning fork or pitch pipe, start by tuning the second thickest string and move through the increasingly thinner strings by one. After tuning the five strings, go back to the thickest string and re-tune it one final time. The following table shows standard tuning.

Guitar

6th (Top)	5th	4th	3rd	2nd	1st
E	A	D	G	B	E

Truss Rod Adjustment

Environmental conditions like temperature and humidity, as well as string tension, can cause bowing of the guitar neck. If your instrument has an adjustable truss rod, you can try to adjust it to keep the neck as straight as possible.

Truss rod in "flat" position

Tightening the truss rod counterclockwise causes the neck to curve downward.

Tightening the truss rod clockwise causes the neck to curve upward.

Changing Strings

1. Remove one string at a time. (Extra strings not included)
2. Unwind the old string at the tuning machine.
3. Remove the old string through the hole on the back of your guitar.
4. Insert a new string through the corresponding hole.
5. Run the string over the neck and the nut.
6. Feed the string through the hole in the tuning machine.
7. Bend the string around the post and wind the string using the tuning peg.

Guitar Care and Maintenance

- Keep your instrument in a case or carrying bag when transporting or storing it.
- Do not place any objects on the top of your instrument.
- Regularly clean your guitar, including the finger board, with a clean, dry, soft cloth.
- Polish the finished surface with an appropriate guitar polish.
- Humidity and temperature affect your guitar. Avoid exposing it to extreme temperatures, high humidity, and excessively dry environments.
